OBJECTIVE

B.Tech CSE (AI/ML) student with hands-on experience building full-stack applications using large language models, deep learning, and computer vision, seeking full-time Software Engineer / AI-ML Engineer roles.

EDUCATION

Bachelor of Technology, Computer Science & Engineering (AI/ML), Jagran Lakecity University, Bhopal
2023 - 2027

Specialization: Artificial Intelligence & Machine Learning

SKILLS

Languages	Python, TypeScript, JavaScript, SQL, HTML/CSS
Frontend	Next.js, React, Tailwind CSS, Framer Motion
Backend	FastAPI, Flask, Node.js
AI/ML	PyTorch, FaceNet-PyTorch, OpenCV, scikit-learn, Groq API (LLMs), Generative AI
Databases	SQLite, MongoDB, JSON-based storage
Tools & Platforms	Git, GitHub, Vercel, Render, Netlify, Docker, JWT Auth, Google OAuth

PROJECTS

CareerLaunch – AI-Powered Interview Preparation Platform [GitHub Link](#)

TypeScript, Next.js 14, FastAPI, Groq API (Llama-3.3-70b), SQLite, NextAuth, Tailwind CSS

- Built a full-stack placement prep platform with AI Mock Interviews, GD Simulator, Resume Builder, ATS Scorer, JD Matcher, and Cover Letter Generator.
- Integrated the Groq LLM API for real-time AI feedback and response generation across multiple features.
- Implemented Google OAuth authentication with NextAuth and a subscription-tier pricing system.

Real-Time Attendance System Using Facial Recognition [GitHub Link](#)

TypeScript, Next.js 15, Python, Flask, PyTorch, FaceNet, OpenCV

- Engineered a real-time attendance system using CNN + FaceNet deep learning models for high-accuracy face recognition.
- Built a teacher dashboard with live attendance monitoring, session management, and Excel export for reports.
- Implemented JWT authentication, bcrypt hashing, and role-based access control (Teacher/Admin); designed a multi-face detection pipeline using MTCNN.

Deep Fake Detector – AI-Powered Video Manipulation Detection [GitHub Link](#)

Python, Next.js, Flask, PyTorch, MTCNN, ResNet-50, BiLSTM, OpenCV

- Built a full-stack deepfake detection app (Next.js frontend, Flask API, PyTorch pipeline) using a hybrid CNN-LSTM model (ResNet-50 + BiLSTM), achieving 82% classification accuracy.
- Handled a 4:1 class imbalance via WeightedRandomSampler and a calibrated confidence threshold (0.575).
- Ensured privacy with a transient /tmp file lifecycle and JWT auth, running inference in ~15s on standard CPU with no GPU required.

E-Commerce Website – Full Stack Web Development [GitHub Link](#)

TypeScript, Next.js, Tailwind CSS

- Developed a modern, performance-optimized e-commerce platform focused on responsive design and seamless user experience.
